

iMath Research is an engineering and Big Data company specializing in technical and information services to get background knowledge and competitive intelligence, for decision-making-solutions.

We bring experience from professional recruitment consultancy. We usually work on predictive models which allow to find best professional from the social net, curriculums or from any database.

Predictive empirical model creation is not so simple. To resolve this, we offer decision making services using numerical and/or categorical predictive models from past empirical experiences, joining with confidence measures. Our platform offers the following actions:

1. Upload your independent variables to predict dependent variables applying actual and past data.
2. Run our predictive engine in the Cloud.
3. Show the best performances and confidence measures, error analysis, etc.
4. The model integrable into your production environment. Let us do it for you!

**iMath Research selected as one of European Startups driving the Big Data reolution with iMathCloud**

## IMATH HR
